

Surgical Sutures & Meshes

State of the art

When experience matters

Our surgical sutures are manufactured in line with state of the art technology. Each individual production process is subject to strict scientific quality control.

Continuous inspection of both mechanical and microbiological characteristics is given top priority.

We have more than 90 years of experience in manufacturing surgical sutures.

Our team understands the specific needs of medical professionals by providing them with access to the most complete portfolio of surgical sutures.

The result is the current modern product range of absorbable and non-absorbable sutures, which consists of more than 1500 individual surgical suture products.

Production takes place in accordance with GMP guidelines, and a comprehensive quality management system in line with ISO 13485 has been implemented.

All products have been CE marked since 1999.

CHIRASORB rapid braided

Intended for use in Skin closure, Paediatric surgery, Episiotomies, Circumcision, Closure of oral mucosa and Ophthalmic surgery for conjunctival sutures.

| Composition | Colour | Range | Characteristics |
|---|--------------------|--------------|---|
| Braided and coated suture made from 90% glycolide and 10% L-lactide | Violet and Natural | 6/0 to 2 USP | Absorbable, multifilament, coated, synthetic, high tensile strength, reduced capillary effect, short-term healing |

CHIRLAC rapid braided

Intended for use in Gynaecology, Skin Closure, Ophthalmic, Odontology and Paediatric surgery.

| Composition | Colour | Range | Characteristics |
|---|--------------------|--------------|---|
| Braided and coated suture made of Polyglycolic acid (PGA) | Violet and Natural | 6/0 to 4 USP | Absorbable, multifilament, coated, synthetic, high tensile strength, reduced capillary effect, short-term healing |

MONOLAC monofilament

General soft tissue approximation and/or ligation in all specialties, where an absorbable material is indicated.

| Composition | Colour | Range | Characteristics |
|--|--------------------|--------------|---|
| Monofilament suture made of Glycolide and ϵ -caprolactone | Violet and Natural | 6/0 to 2 USP | Absorbable, monofilament, synthetic, high tensile strength, excellent handling properties, mid-term healing |

CHIRASORB braided

Intended for use in general soft tissue approximation and/or ligation in all specialties, including use in Ophthalmic surgery.

| Composition | Colour | Range | Characteristics |
|---|--------------------|---------------|---|
| Braided and coated suture made from 90% glycolide and 10% L-lactide | Violet and Natural | 10/0 to 6 USP | Absorbable, multifilament, coated, synthetic, high tensile strength, reduced capillary effect, mid-term healing |

CHIRASORB Plus braided

Antibacterial

Intended for use in general soft tissue approximation and/or ligation in all specialties.

| Composition | Colour | Range | Characteristics |
|---|--------------------|--------------|---|
| Antibacterial, braided and coated suture made from 90% glycolide, 10% L-lactide and chlorhexidine diacetate | Violet and Natural | 5/0 to 4 USP | Absorbable, multifilament, anti-bacterial coating, synthetic, high tensile strength, reduced capillary effect, mid-term healing |

CHIRLAC braided

Intended for use in general soft tissue approximation and/or ligation, surgical adaptation of Muscles and Fascia, suturing of Parenchymal organs, Peripheral nerves and ligatures of small vessels and for Intradermal suturing.

| Composition | Colour | Range | Characteristics |
|---|--------------------|--------------|---|
| Braided and coated suture made of Polyglycolic acid (PGA) | Violet and Natural | 9/0 to 6 USP | Absorbable, multifilament, coated, synthetic, high tensile strength, reduced capillary effect, mid-term healing |

POLYDOX monofilament

Intended for use in general soft tissue approximation, Orthopaedics, Fascia Closure, Urology, Gynaecology and Plastic surgery. Recommended for long-term healing.

| Composition | Colour | Range | Characteristics |
|--|--------------------|--------------|--|
| Monofilament suture made of Poly-p-dioxanone | Violet and Natural | 7/0 to 4 USP | Absorbable, monofilament, synthetic, high tensile strength, excellent knotting properties, long-term healing |

CHIRAFLON monofilament

Intended for use in all surgical specialities, especially Orthopaedic, Traumatology (tendons), Plastic and Ophthalmic surgery (optimal, temporary, easily, removable suture).

| Composition | Colour | Range | Characteristics |
|--|--------|--------------|---|
| Monofilament suture made of Polyvinylidene Fluoride (PVDF) - similar to Teflon | Blue | 8/0 to 3 USP | Non-absorbable, monofilament, synthetic, no capillary effect, very smooth, excellent knotting properties, easy to handle, physiologically inert |

CHIRALEN monofilament

Intended for use in all surgical specialities, especially Cardiovascular, Plastic, Reconstructive, Ophthalmic, Orthopaedics and Traumatology (tendons).

| Composition | Colour | Range | Characteristics |
|---|----------------|---------------|--|
| Monofilament suture made of Polypropylene | Blue and Black | 10/0 to 2 USP | Non-absorbable, monofilament, synthetic, no capillary effect, smooth, non-porous surface, suitable for stitches in infected wounds |

SILON monofilament

Intended for use in Plastic and General surgery and wherever suturing the skin.

| Composition | Colour | Range | Characteristics |
|---|----------------|---------------|--|
| Monofilament suture made of Polyamide 6 | Blue and Black | 10/0 to 2 USP | Non-absorbable, monofilament, synthetic, very smooth, excellent knotting properties, easy to handle, loss of tensile strength after long-term implantation |

TERVALON braided

Intended for use whenever non-absorbability and low friction passage through tissues are needed. It is especially useful in suturing Tendons, Schwann sheaths and skin in Plastic and Reconstructive surgery.

| Composition | Colour | Range | Characteristics |
|---|-----------------|--------------|--|
| Braided and coated suture made of Polyester | Green and White | 6/0 to 6 USP | Non-absorbable, multifilament, synthetic, high tensile strength, no capillary effect, well tolerated by the tissue, low friction |

Surgical Sutures - Non-absorbable threads

SILON braided

Intended for use in Skin Closure, Subcutaneous tissue, Transversely cut muscles, Fascia, Peritoneum, Gastrointestinal Tract and Blood vessels ligation.

| Composition | Colour | Range | Characteristics |
|----------------------------------|-----------------|--------------|---|
| Braided suture made of Polyamide | White and Black | 5/0 to 5 USP | Non-absorbable, multifilament, synthetic, high tensile strength, excellent knotting properties, loss of tensile strength after long-term implantation |

SILK braided

Intended for use in Skin closure, Subcutaneous tissue, Fascia, Peritoneum, Plastic surgery, Gynaecology and the organs of the Gastrointestinal tract.

| Composition | Colour | Range | Characteristics |
|--|--------|--------------|--|
| Braided and coated suture made of Silk | Black | 9/0 to 5 USP | Non-absorbable, multifilament, synthetic, no capillary effect, loss of tensile strength after long-term implantation |

European Pharmacopoeia

The publication of the European Pharmacopoeia (Ph. Eur.) resulted in a standardization of the classification of threads and gauges of surgical suture material.

The Ph. Eur. specifies a decimal classification and metric coding for the gauges. It quotes a thread diameter of 1/10 mm, so that the thread gauge of 3.5 has a diameter of 0.35 mm.

The following table of the gauges gives a comparison of the metric and the USP gauge coding.

| EP/ Metric | USP | Ø (mm) | Ø (mm) Absorbable monofilaments |
|---------------|-------------|-------------|------------------------------------|
| 0.2 | 10-0 | 0,020-0,029 | |
| 0.3 | 9-0 | 0,030-0,039 | |
| 0.4 | 8-0 | 0,040-0,049 | |
| 0.5 | 7-0 | 0,050-0,069 | 0,050-0,094 |

Packaging

The packaging of our surgical suture material is stable, user-friendly and functional. It provides optimal mechanical and bacterial safety.

The sutures are ready for use in a sterile foil or aluminium pack.

Each primary sales unit contains 24 individual packs, whereas some contain 12 individual packs (Loop sutures or Microsurgery sutures) or 20 individual packs (Chirapack sutures).

Short threads

Pre-cut length surgical sutures.

Atraumatic sutures

Pre-cut length surgical sutures, armed with a drilled end needle, ready for use.

Removable needles are marked with an A behind the needle description.

Chirapack

2.5 or 3 meters of suture material on a thread spool, ready for use. Each sales unit contains 20 individual packs.

How to unpack the suture - Alufoil

UK01
14

1. Open the non-sterile outer package

2. Transfer to sterile area

3. Tear off the opening system, indicated by the dotted line

4. Take immediate, direct hold of the needle. Pull out the suture towards the right

How to unpack the suture - Blisterfoil

1. Open the non-sterile outer package

2. Transfer to sterile area

3. Tear off the opening system, indicated by the dotted line

4. Take immediate, direct hold of the needle. Pull out the suture towards the right

rapid

CHIRASORB rapid braided

CHIRASORB rapid braided is a short-term absorbable, coated, synthetic, multifilament suture made of 90% glycolide and 10% L-lactide. The substances contained in the coating and suture are nonantigenic and noncollagenous. Sterile Chirasorb rapid braided is available in violet and natural.

Absorption begins as a loss of tensile strength without appreciable loss of mass. The product elicits a minimal acute inflammatory reaction in tissues.

Progressive loss of tensile strength and absorption of Chirasorb rapid braided occurs by hydrolysis, when the polymer is degraded to glycolic and lactic acids, which are subsequently absorbed and metabolised by the body.

Indication: Skin closure (e.g. intracutaneous, subcutaneous), Paediatric surgery, Episiotomies, Circumcision, Closure of oral mucosa and Ophthalmic surgery for conjunctival sutures.

Contraindication: Chirasorb rapid braided should not be used in tissues subject to expansion, stretching or distension, or which might require long-term mechanical support.

Sizes: 6/0 to 2 USP

Structure: Multifilament

Absorption method: Hydrolysis

Strength Retention Profile:

| SHORT-TERM HEALING (12 days) | |
|------------------------------|------|
| 1 Day | 100% |
| 5 Days | 50% |
| 10-14 Days | 0% |

braided**

Chirlac rapid

Chirlac

Chirlac rapid

CHIRLAC rapid braided

CHIRLAC rapid braided is a short-term absorbable, coated, synthetic, multifilament suture made of low molecular weight polyglycolic acid. The substances contained in the coating and suture are nonantigenic and noncollagenous. Chirlac rapid braided is available in violet and natural.

Progressive loss of tensile strength and absorption of Chirlac rapid braided occurs by hydrolysis, where the polymer degrades to glycolic acid, which is subsequently absorbed and metabolised by the body.

Absorption begins as a loss of tensile strength without appreciable loss of mass. The product elicits a minimal acute inflammatory reaction in tissues.

Indication: Gynaecology, Ophthalmic (e.g. conjunctiva), Odontology (e.g. oral mucosa), Paediatric and Skin Closure (e.g. intracutaneous, subcutaneous).

Contraindication: Chirlac rapid braided should not be used in tissues subject to expansion, stretching or distension, or which might require long-term mechanical support longer than seven days. The suture is not for use in cardiovascular or neurological tissues.

Sizes: 6/0 to 4 USP

Structure: Multifilament

Absorption method: Hydrolysis

Strength Retention Profile: SHORT-TERM HEALING (12 days)

| | |
|------------|------|
| 1 Day | 100% |
| 5 Days | 60% |
| 10-14 Days | 0% |

Mass Absorption profile: 42 days

MONOLAC monofilament

MONOLAC monofilament is a mid-term absorbable, synthetic suture made of glycolide and ϵ -Caprolactone, available in natural colour for the closure of superficial wounds and in violet for all other indications, when a mid-term monofilament is needed.

During absorption the material elicited only a very slight inflammation.

The material is degraded into adipic acid, which is completely metabolised in the body. The process begins with a loss of tensile strength, followed by a loss of mass at a later stage.

Indication: General soft tissue approximation and/or ligation in all specialties, where an absorbable material is indicated.

Contraindication: Monolac monofilament should not be used in tissues subject to expansion, stretching or distension, or which might require long-term mechanical support.

Sizes: 6/0 to 2 USP

Structure: Monofilament

Absorption method: Hydrolysis

chirasorb

**Chirasorb
braided**

Chirasorb

chirasorb

Chirasorb

CHIRASORB braided

CHIRASORB braided is a mid-term absorbable, coated, synthetic, multifilament suture made of 90% glycolide and 10% L-lactide. The substances contained in the coating and suture are nonantigenic and noncollagenous.

Sterile Chirasorb braided is available in violet or natural. The product elicits a minimal acute inflammatory reaction in tissues.

Progressive loss of tensile strength and absorption of Chirasorb braided occurs by hydrolysis, when the polymer is degraded to glycolic and lactic acids, which are subsequently absorbed and metabolised by the body.

Indication: General soft tissue approximation and/or ligation in all specialties, including use in Ophthalmic surgery.

Contraindication: Chirasorb braided should not be used in tissues subject to expansion, stretching or distension, or which might require long-term mechanical support.

Sizes: 10/0 to 6 USP

Structure: Multifilament

Absorption method: Hydrolysis

Strength Retention

Profile: MID-TERM HEALING (35 days)

CHIRASORB Plus braided

Antibacterial

CHIRASORB Plus braided is a mid-term absorbable, antibacterial coated, synthetic, multifilament suture made of 90% glycolide and 10% L-lactide. The braided suture is covered with antibacterial coating, which consists of copolymer glycolide and lactide, calcium stearate and chlorhexidine diacetate.

Chlorhexidine is a cationic antiseptic with a wide range of antimicrobial effects. It is effective on both Gram-positive and Gram-negative bacteria; the mechanism of action is cytoplasmic membrane disruption.

Sterile Chirasorb Plus braided is available in violet or natural. The product elicits a minimal acute inflammatory reaction in tissues.

Progressive loss of tensile strength and absorption of Chirasorb Plus braided occurs by hydrolysis, when the polymer is degraded to glycolic and lactic acids, which are subsequently absorbed and metabolised by the body.

Indication: General soft tissue approximation and/or ligation in all specialties.

Contraindication: Chirasorb Plus braided should not be used in tissues subject to expansion, stretching or distension, or which might require long-term mechanical support. Chirasorb Plus braided should not be used in patients with known allergic reactions to Chlorhexidine.

Sizes: 5/0 to 4 USP

Structure: Multifilament

Absorption method: Hydrolysis

Strength Retention

Profile: MID-TERM HEALING (35 days)

1 Day 100%

14 Days 75%

21 Days 50%

Mass Absorption

profile: 56 - 70 days

Chirlac

Chirlac

Chirlac

CHIRLAC braided

CHIRLAC braided is a mid-term absorbable, synthetic, multifilament suture material of extremely high tensile strength made of the homopolymer of hydroacetic acid (glycolic acid).

The thread has a homogeneous structure and surface, which gives it low frictional properties and holds firmly without slipping when knotted.

Chirlac braided is coated with an absorbable substance, which reduces the capillary effect, provides excellent holding properties and diminishes the tendency to cut into the flesh, while ensuring that the knots hold firmly.

Chirlac braided is degraded in the body by a simple hydrolytic process.

UK01
101

Absorbable - Chirlac braided

Indication: General soft tissue approximation and/or ligation, for the surgical adaptation of Muscles and Fascia, for suturing of Parenchymal organs, Peripheral nerves, for ligatures of small vessels and for Intra-dermal suturing.

Contraindication: Chirlac braided should not be used in tissues subject to expansion, stretching or distension, or which might require long-term mechanical support.

Sizes: 9/0 to 6 USP

Structure: Multifilament

Absorption method: Hydrolysis

Strength Retention Profile:

| | |
|---------------------------------|-----------|
| MID-TERM HEALING (28 - 35 days) | |
| 1 Day | 100% |
| 14 Days | 65% - 75% |
| 21 Days | 45% - 50% |

Mass Absorption profile: 80 - 90 days

POLYDOX monofilament

POLYDOX monofilament is a long-term absorbable, synthetic suture made of polydioxanone. The suture offers good handling combined with great strength due to its slow degradation profile.

Polydox monofilament is ideal for all indications, where an extended wound support of more than 4 weeks is desirable. The threads are available in violet and natural.

The suture is very flexible, pliable and easy to knot. In tissue, the thread can cause a slight initial inflammatory reaction.

Indication: General soft tissue approximation, Orthopaedics (e.g. Joint capsule, Tendons), Fascia Closure, Urology, Gynaecology and Plastic surgery.

Contraindication: Polydox monofilament should not be used where prolonged approximation of tissues under stress is required.

Sizes: 7/0 to 4 USP

Structure: Monofilament

Absorption method: Hydrolysis

Strength Retention Profile: LONG-TERM HEALING (90 - 98 days)

| | |
|---------|------|
| 1 Day | 100% |
| 45 Days | 50% |

Mass Absorption profile: 180 - 240 days

CHIRAFLON monofilament

CHIRAFLON monofilament is a non-absorbable suture made of PVDF (similar to teflon). Physiologically this thread is completely inert.

Chiraflon monofilament offers optimal smoothness and superior knotting properties. The thread is characterised by its high tensile strength. No splitting occurs even under considerable strain.

Indication: All surgical specialities, especially Orthopaedic, Traumatology (tendons), Plastic and Ophthalmic surgery.

Contraindication: Chiraflon monofilament must not penetrate into the inner parts of the digestive and urinary tracts.

Chemical Composition: Polyvinylidene Fluoride (PVDF)

Sizes: 8/0 to 3 USP

Structure: Monofilament

Absorption method: Non-absorbable

Colour: Blue

Chiralen

CHIRALEN monofilament

CHIRALEN monofilament is a non-absorbable suture made of polypropylene. The thread is hydrophobic and is not subject to degradation by tissue enzymes.

Chiralen monofilament has a smooth, non-porous surface, that guarantees a clean and smooth passage through the tissue, optimal elasticity, good elongation properties and high visibility. In tissues, it can cause a minimal acute inflammatory reaction.

Indication: All surgical specialities, especially Cardiovascular, Plastic, Reconstructive, Ophthalmic, Orthopaedic and Traumatology (e.g. tendons).

Contraindication: Chiralen monofilament must not penetrate into the inner parts of the digestive and urinary tracts.

Chemical Composition: Polypropylene

Sizes: 10/0 to 2 USP

Structure: Monofilament

Absorption method: Non-absorbable

Colour: Blue and Black

Silon

monofilament

SILON monofilament

SILON monofilament is a non-absorbable, synthetic suture made of polyamide, which has a smooth non-porous surface.

The thread is extremely useful for skin sutures and has a high tensile strength in knots, and knots tie down easily. The thread is available in blue and black.

Silon monofilament can cause a slight initial inflammatory tissue reaction.

Indication: Plastic and General surgery and wherever suturing the skin.

Contraindication: Silon monofilament should not be used when long-term mechanical support is required.

Chemical Composition: Polyamide 6

Sizes: 10/0 to 2 USP

Structure: Monofilament

Absorption method: Non-absorbable

Colour: Blue and Black

SILON monofilament blue ligatures

Tervalon

**Tervalon
braided**

Tervalon

Tervalon

Tervalon

TERVALON braided

TERVALON braided is a polyester suture material with a special coating, which guarantees effortless tissue passage and excellent knot-tying characteristics.

The extreme tensile strength and tissue compatibility are further positive characteristics of Tervalon braided, which is used in all areas of surgery due to its favourable features.

Tervalon braided is applicable wherever non-absorbability and low-friction passage through tissues are needed.

The suture elicits a minimal inflammatory reaction in tissues, which is followed by gradual encapsulation of the suture by fibrous connective tissue.

Indication: Whenever non-absorbability and low friction passage through tissues are needed. It is especially useful in suturing Tendons, Schwann sheaths and skin in Plastic and Reconstructive surgery.

Contraindication: Tervalon braided must not penetrate into the inner parts of the digestive and urinary tracts.

Chemical Composition: Polyester

Sizes: 6/0 to 6 USP

Structure: Multifilament

Absorption method: Non-absorbable

Colour: Green and White

Silon braided

Silon braided

Silon braided

Silon braided

Silon braided

SILON braided

SILON braided is non-absorbable, multifilament suture made of polyamide. Braided sutures made of polyamide have excellent tissue biocompatibility, minimal resistance to tissue passage and high knot security. The sutures are characterized by a strong knot-pull strength.

The sutures elicit a minimal initial inflammatory reaction in tissues, which is followed by gradual encapsulation of the sutures by fibrous connective tissue.

Indication: Skin closure, Subcutaneous tissue, Transversely cut muscles, Fascia, Peritoneum, Gastrointestinal tract and Blood vessels ligation.

Contraindication: Silon braided should not be used for suturing infected wounds. It should not be used when long-term mechanical support is required.

Chemical Composition: Polyamide

Sizes: 5/0 to 5 USP

Structure: Multifilament

Absorption method: Non-absorbable

Colour: White and Black

SILON braided white ligatures

SILK braided

SILK braided is a natural and non-absorbable, multifilament suture material. To give Silk braided a certain stiffness a special technology is applied.

The braided suture is stiffened by inserting a twisted stem from the same material. The Silk is coated to achieve water resistance and avoid its high capillary effect.

Silk braided is characterised by its constant thread diameter and high tensile strength. The advantages of Silk braided sutures are their extreme pliability, ease of handling and excellent knot strength.

Indication: Skin closure, Subcutaneous tissue, Fascia, Peritoneum, Plastic surgery, Gynaecology and the organs of the Gastrointestinal tract.

Contraindication: Silk braided should not be used for suturing infected wounds. Silk braided cannot be used when permanent suture stability is required.

Chemical Composition: Natural silk

Sizes: 9/0 to 5 USP

Structure: Multifilament

Absorption method: Non-absorbable

Colour: Black

The background is a solid dark blue color. It features several large, overlapping, light blue shapes that resemble stylized leaves or petals. These shapes are arranged in a way that creates a sense of depth and movement, with some appearing to be in front of others. The overall aesthetic is clean and modern.

Eye needles

Surgical Eye needles are made of high-quality stainless steel. Different types of needles are available to meet a full range of requirements. The needles are always packed in foil pouches with 12 pieces.

The surgical Eye needle range consists of Eye needles with a double spring eye and with a regular eye.

Surgical Meshes

Surgical Meshes have become standard for the repair of abdominal wall hernias. Surgical mesh is a sterile woven material designed for permanent implantation within the body during open or laparoscopic procedures.

A wide range of mesh implants are available, with two main functions: to stabilise and strengthen soft tissue defects, and to act as a sling to support prolapsed organs and viscera. In tissue repair applications, the mesh serves to mechanically strengthen the weakened area whilst simultaneously promoting long-term stability by acting as a scaffold for new tissue growth. It is most commonly used in pelvic organ prolapse, urinary stress incontinence and hernia repairs.

CAPROMESH

Partially absorbable

The sterile, partially absorbable, composite mesh is made from two components: one absorbable and one non-absorbable.

Capromesh is composed of an absorbable segmented copolymer of glycolide and ϵ -caprolactone and non-absorbable polypropylene monofilament fibres. The monofilament structure of the mesh decreases the risk of infection and inflammation.

After absorption of the absorbable part, only the polypropylene mesh remains in the body. The structure and size of the residual mesh are optimally designed for the physiological stress to which the abdominal wall is subject.

Indication: Capromesh is indicated in the operative treatment of fascial defects, in particular hernias, and weakened abdominal wall, the healing of which requires long-term bridging or strengthening of the damaged structures.

Technical information

Fibre thickness: Approx. 500 μm

Pore size: 2 - 4 mm

Weight: Initial: approx. 85 g/m^2 . PP - contents approx. 28 g/m^2

Stiffness: Initial: approx. 20 mg. After absorption: approx. 1 mg

Burst strength of the mesh: Initial: approx. 300 N. After absorption: approx. 175 N

Absorption time: PGA/PCL part: approx. 90 - 120 days

Advantages

Advantages for the surgeon:

- Low inflammation risk due to monofilament structure
- Mesh can be cut into any shape and remains stable
- Optimal and safe handling during surgery
- Suitable for all operation techniques
- Made from proven materials: Monolac monofilament (PGA/PCL) and Chiralen (PP)
- Good balance between price and quality

Advantages for the patient:

- Lower risk of infection
- Minimal foreign body component after partial absorption
- Optimal elongation in both directions
- Maximal comfort for the patient due to optimal softness
- Residual weight of the PP-net is only 25 g/m²

CHIRALEN meshes

CHIRALEN meshes

Non-absorbable

The sterile and surgical meshes are made from undyed polypropylene filaments. The knitted filaments have a smooth and hydrophobic surface, which biologically are absolutely inert. High elasticity in both directions guarantees good elasticity and flexibility. This construction enables the mesh to be cut to any shape or size without unravelling.

The meshes' tensile strength and tear resistance are in line with the natural properties of the body, so the meshes can be used for various indications. The special structure, increased pore size and particularly fine monofilaments provide a macroporous, very light and flexible mesh implant. Its greater porosity allows more rapid ingrowth of the body's cells, which stabilises the tissues.

The mesh can be fixed in the location of the wound. For this purpose non-absorbable suture material should be used at a distance of at least 6.5 mm from the edge of the mesh.

Chiralen meshes are available in different sizes, all offering high strength and high flexibility. Chiralen meshes are available in a weight of approx. 125 g/m² or in the light version with a weight of approx. 55 g/m².

Indication: Chiralen meshes are indicated in the operative treatment of fascial defects, in particular hernias, which require long-term bridging of damaged structures.

Technical information - Chiralen mesh

Weight: 125 g/m²

Thickness of filament: 0.420 mm

Pore density: 48 pores/1 cm²

Technical information - Chiralen mesh light

Weight: 55 g/m²

Thickness of filament: 0.320 mm

Pore density: 48 pores/1 cm²

Pore size gross: 218 µm
(net: 180 µm)

CHIRALEN meshes light

Advantages

- Minimises foreign-body reactions
- Security combined with great comfort for the patient
- Optimised scar tissue formation

VMG

Vitrex Medical Group

VMG Vitrex Medical Group

CTI group has per November 2024 been renamed to “VMG Vitrex Medical Group”. The strategy of the group remains the same - to develop and distribute healthcare products of great quality. The vision of the group has changed and instead of being a group of individual companies, the vision is to create “one team” by migrating the companies’ in terms of strategy, values, departments, processes, know-how and capabilities.

As VMG Vitrex Medical Group, we strive to be the leading European medical device & IVD manufacturing group, developing, producing and supplying high-quality healthcare products and tailor-made med-tech solutions that embody special expertise, reliability, trustworthiness and are made with respect and dedication to enhance the life of healthcare professionals and their patients worldwide.

VMG Vitrex Medical Group

Manufacturing sites

CHIRANA T. Injecta, Slovakia

CHIRANA T. Injecta is a global, state of the art manufacturer of healthcare products, which was founded in 1935.

In 1947 CHIRANA T. Injecta started manufacturing glass syringes and they have ever since focused on development and production of high quality, disposable syringes, needles and metal tubes for the healthcare sector and med-tech companies.

VITREX Medical, Denmark

Vitrex Medical was founded in 1967, where they started producing resistors for televisions, which later on evolved to producing capillary tubes to transport liquids.

With more than 50 years of experience Vitrex Medical has become the largest manufacturer of capillary tubes in the world today by developing equipment, establishing technologies, and optimizing production processes.

CHIRANA T. Injecta, Czech Republic

CHIRANA T. Injecta was founded in 1930. Since the early 1990s they have made substantial investments in upgrading the production resources, enabling the company to offer products in a unique quality.

Their more than 90 years of experience with manufacturing sutures has resulted in top priority within quality control, product development and sutures manufactured in line with state of the art technology.
